

## Project Design Phase-II

### Technology Stack (Architecture & Stack)

|               |  |
|---------------|--|
| Team ID       | PNT2022TMID05837                       |
| Project Name  | Retail Store Stock Inventory Analytics |
| Maximum Marks | 4 Marks                                |

## Technical Architecture:

**Table-1 : Components & Technologies:**

| <b>S.No</b> | <b>Component</b>   | <b>Description</b>  | <b>Technology</b>   |
|-------------|--------------------|---|---|
| 1.          | User Interface     | The user interacts with application using Web UI  | HTML, CSS, JavaScript   |
| 2.          | Data Processing    | The data from the dataset is pre-processed  | IBM Cognos Analytics  |
| 3.          | Cloud Database     | The clean dataset is stored on IBM Cloud  | IBM Cloud   |
| 4.          | Data visualization | The data is visualized into different forms   | IBM Cognos Analytics, Python  |
| 5.          | Prediction         | These Algorithm techniques are used to predict the proper way to make the stock in store. | ML algorithms –Logistic Regression, Linear Regression, Random Forest, ABC Techniques. |

**Table-2: Application Characteristics:**

| <b>S.No</b> | <b>Characteristics</b>   | <b>Description</b>   | <b>Technology</b>  |
|-------------|--------------------------|--|--|
| 1.          | Open-Source Frameworks   | Open-source frameworks used  | IBM Cognos Analytics, Python   |
| 2.          | Security Implementations | Request authentication using Encryptions                             | Encryptions  |
| 3.          | Scalable Architecture    | Scalability consists of 3-tiers                                      | Web Server – HTML, CSS, Javascript<br>Application Server – Python<br>Database Server – IBM Cloud |
| 4.          | Availability             | The application is available for cloud users                         | IBM Cloud Hosting  |
| 5.          | Performance              | The user can know how to maintain the inventory to increase profits. | ML algorithms  |
